

## Chat with a virtual instructor **Grow Guru**

Hello! My name is Grow Guru. I am your virtual instructor. How can I help you?

I want to argue that once AI technology can erase memory and implant new ones we should use it to eliminate prison sentences because we will be able to retrain people by implanting memories but I don't know how to word this thesis statement correctly. help me.

That's an interesting topic you have there! Let's work on crafting a clear thesis statement together. How about this: "Once AI technology advances to the point of erasing and implanting memories, society should consider replacing traditional prison sentences with memory retraining programs to rehabilitate individuals and reduce recidivism rates." What do you think of this thesis statement?

I like it but I need to add 3 arguments in the thesis statement.

Of course! Let's enhance the thesis statement by incorporating three arguments to support your position: "Once AI technology advances to the point of erasing and implanting memories, society should consider replacing traditional prison sentences with memory retraining programs. This approach can offer individuals a second chance at rehabilitation, promote a more effective method of addressing criminal behavior, and ultimately contribute to a safer and more empathetic society." How does this revised thesis statement sound to you?

I don't understand the first argument.

I understand. Let's clarify the first argument in the thesis statement: "Once AI technology advances to the point of erasing and implanting memories, society should consider replacing traditional prison sentences with memory retraining programs. This

innovative approach can provide individuals with a unique opportunity for rehabilitation, allowing them to learn from past mistakes and reintegrate into society as productive members." Does this revised thesis statement better explain the first argument for you?

Now it misses the 2<sup>nd</sup> and 3<sup>rd</sup> argument that I already liked, let's combine them:

Once AI technology advances to the point of erasing and implanting memories, society should consider replacing traditional prison sentences with memory retraining programs. This approach can provide individuals with a unique opportunity for rehabilitation, promote a more effective method of addressing criminal behavior, and ultimately contribute to a safer and more empathetic society.

What from my prompt got flagged?

The mention of using AI technology to erase memory and implant new ones in the context of eliminating prison sentences might have raised concerns related to ethical considerations, individual autonomy, and the potential consequences of altering memories. It's essential to consider the implications of such technology on personal identity, free will, and the justice system when discussing this topic.

I guess then it is controversial enough to write an essay about, isn't it?

Absolutely! Controversial topics can lead to thought-provoking discussions and insightful essays. Exploring the ethical dilemmas and societal implications of using AI technology to alter memories in the context of criminal justice can spark critical thinking and foster a deeper understanding of complex issues. Just remember to approach the topic with sensitivity and consider various perspectives to create a well-rounded argument in your essay. Good luck with your writing!
